# Post-harvest losses in retail fruit marketing in Konkan region of Maharashtra: An economic analysis 

SR Torane, SS Torane, AD Chakranarayan, PJ Kshirsagar and SR Bagade

#### Abstract

The study entitled Post-harvest losses in retail fruit marketing in Konkan region of Maharashtra: an economic analysis was undertaken to assess season wise availability, annual purchase, wastage, sale, cost and return of fruits. 45 fruit vendors from three tahsils of Ratnagiri district of south Konkan region selected for study. The result revealed that fruits Dates (dry), Orange, Kiwi, Pineapple, Banana, Pomegranate, Tender Coconut, Sweet lime, Sapota were available throughout the year. The percentage of average wastage in fruits at retailer level was 12.56 percent. The total cost incurred retail marketing was Rs. 1779835 and gross returns were Rs. 1952281 resulting into net income to the extent of Rs. 172446. The ratio of cost returns was 1:1.10.

Keywords: Konkan, losses, retail, fruit marketing, economic

## Introduction

India is known as Fruit and vegetable basket of the world. It is second largest producer of overall fruits and vegetable production in the world, after China. In spite of being a major producer of fruit, the per capita availability of fruits is lower at 200 gm per day than the recommended level of 400 gms . One of the reasons attributed to lower availability is the larger quantity of post- harvest losses (18-20 percent FAO, 2021) that occurs at various stages of marketing. This makes adverse effect on income of producers as well as consumers. The objective of the present study was to assess the marketing of retail mango and other fruit and problems of vendors. The 45 fruit vendors from three tehsils of Ratnagiri district were interview through specially designed schedule during agricultural year 2022. It has been observed that the vendors purchase about 28 types of fruits, in a year and spare a relatively smaller amount each of the fruit according to their seasonal availability, which indicates their market awareness and appropriate knowledge of various fruits and their seasonal availability.

## Materials and Methods

In present study 45 fruit vendors were interviewed from Chiplun, Dapoli and Khed cities in Ratnagiri district. Out of total sample maximum vendors ( $55.56 \%$ ) were hand cart vendors followed by hired shops vendors ( $37.78 \%$ ) and owned shop fruit Salers ( $6.67 \%$ ). The owned shop fruit Salers were very small in number (3) hence they were excluded from study. Finally 21 Hand Cart vendors and 21 Hired shop owners were selected for study, consisting seven vendors of each type from each Tahasil. The data was collected for year 2022.

## Season wise availability of fruits

The information regarding season wise availability of fruits sale in study area is depicted in the Table 1. It can be observed from table that apple was available throughout year, in which apple from Himachal Pradesh was sold during September to December, Similarly apple from Kashmir was sold during November and December. The imported apple was also reported to from USA, Turkey, Iran, Chilli and sold during January to August. Pear, Nashpati and Naka were available during September to December. The Dates (dry), Orange, Kiwi, Pineapple, Banana, Pomegranate, Tender Coconut, Sweet lime, Sapota were available throughout the year.

In case of mango it was observed that Totapuri, Dashhari, Lalbaug, Nilam, Badam, Payari and Alphonso were found to be sold in the study area. The Alphonso was sold during January to May. The Lalbaug and Badam were sold during

March to July. The Totapuri and Dashhari were found to be available during June to September. The Nilam was available during July to August and Payari was sold during March to May.

Table 1: Season wise availability of fruits in study area.

## Purchase of fruits

The information regarding annual per vendor purchase of fruits is given in table 2. It was observed from table 2 that the per vendor total annual purchase of all 27 types of fruits was Rs. 1649967. In case of mango the per vendor annual purchased quantity of Totapuri was 12.54 crates of 25 Kg each.
The mango variety "Dashahari" was purchased to the extent of 10.04 crates of 25.00 Kg each accounting to Rs. 18181.

The Lalbaug mango variety was also purchased about 16.10 crates of 20 Kg packings (Rs.31430). The 12.00 crates of 25.00 each, were estimated to be purchased in case of Nilam variety (Rs. 20651). The mango variety "Badam" was purchased to the extent of 11.94 crates of 20.00 Kg each. The Payari variety was purchased in two dozen boxes and 11.97 dozen were purchased at the rate of 218 per dozen (Rs. 2612). The 213.07 dozens of Alphonso variety of mango was purchased at average rate of Rs. 301 per Kg.

Table 2: Per Vender annual purchase of fruits by fruit vendors/ retailers.

| 27 | Papaya | 15.00 | kg | 48.52 | 556 | 26989 | 1.64 |

The quantity of dates (dry) and dates (fresh) purchased was 11.24 bags of 50.00 Kg each and 12.04 cartoons of 10.00 Kg each, respectively. It was observed that the quantity of orange purchased in year was about 52.73 crates weighing 15.00 Kg each. The 239.07 containers of kiwi fruit was found to be purchased in a year.
The other fruits sold by retail vendors were Naka, Cherry, Dragon fruit, Sapota, Guva, Strawberry, Watermelon, Tender coconut, Muskmelon, Ber, Pomengranet, Alubukhar, Banana and Papaya. The total annual expenditure on purchase of all the fruits was Rs. 1649967 out of which maximum expenditure was incurred on purchase of imported apple. Rs.

178916, followed by Banana (Rs. 164563), Watermelon (Rs. 137059) and Tender coconut (Rs. 125979). It was concluded that the vendors purchase about 28 types of fruits, in a year and spare a relatively smaller amount each of the fruit according to their seasonal availability, which indicates their market awareness and appropriate knowledge of various fruits and their seasonal availability.

## Wastage of fruits in retail marketing

The information regarding wastage of fruits in retail marketing is given in table No. 3

Table 3: Wastage of fruits in retail marketing

|  |  | Total | 23301.05 | 2926.81 | 20374.18 | 12.56 |
| 27 | Tender coconut | Nos | 3602.48 | 0.00 | 3600.00 | 0.00 |
| 28 | Dates (Dry) | kg | 562.00 | 0.00 | 550.91 | 0.00 |

It is observed from table that in case of tender coconut and dates (dry) there was no any wastage during retail marketing. It was revealed from table that out of total purchased quantity i.e. 23301.05 Kg the wastage of quantity was 2926.81 Kg and actual quantity sold was 20374.18. The percentage of average wastage in fruits at retailer level was 12.56 percent. Among the various fruits maximum wastage was found in case of Pomegranate (30\%) followed by Dragon fruit (25\%), Strawberry (23.74\%), Muskmelon (23.19\%), Grapes (20.63\%), Alubukhar (20\%), Sapota (19.79\%), Orange ( $19.76 \%$ ), Banana ( $15.08 \%$ ) Pear ( $15.83 \%$ ).It was concluded that the wastage in retail marketing is substantial ( $12.56 \%$ ) and the ways means should be examined to reduce it so that
the net income of vendors could be increased.

## Sale of fruits

The information regarding annual sale of fruits by retail fruit Salers is given in table. 4.
It was observed from table that the total sale receipt received from fruit sale was Rs. 1952281. Out of which maximum income Rs. 300062 (15.37\%) was received from apples. Out of total income from apples, the imported apples accounted maximum 64 percent followed by Kashmir apples 20. 60 percent and Himachal apple 15.01 percent. The banana ranked second in sale receipts. The total sale from banana was Rs. 244174 (12.51\%).

Table 4: Annual Sale of fruits by venders/retailers.

| C |  | Total cost | 1779835 | 100.00 |
| D |  | Gross income | 1952281 |  |
| E |  | Net income | 172446 |  |
|  |  | Ratio of cost returns | 1:10 |  |

## Reduction of income due to fruit wastage

An attempt has been made to work out the wastage of fruits in retail marketing.

The information regarding reduction of income due to fruit wastage is presented in table 6.

Table 6: Annual reduction of income of retailers/vendors due to fruit wastage.

| Sr. No | Particulars | Unit | Rs./percent |
| :---: | :---: | :---: | :---: |
| A | Value of purchased fruits | RS | 1649967 |
| B | Value of sold fruits | RS | 1952281 |
| C | Value of wastage fruits | RS | 307789 |
|  | Total B+C | RS | 2260070 |
| D | Percentage of reduction in income due to fruit wastage | Percent | 13.62 |

It was observed from table that the value of purchased fruit was Rs. 1649967 and value of actually fruits sold was estimated to Rs. 1952281. The value of wastage of fruits as per selling rates was worked out to Rs. 307789, if we assume there is no wastage of fruits then the total income earned would have been Rs. 2260070 . However, as there a fruit wastage is about 12.56 percent of total quantity of fruits, the
actual reduction of income was worked out to 13.62 percent, which need to be reduced to maximum possible extent.

## Problems and suggestions

The information regarding problems in retail marketing and suggestions from fruit vendors is given are table 7.

Table 7: Problems faced by retailers /vendors in marketing of fruits and their suggestions

| Sr. No. | Particulars | Nos. | Percent (\%) |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Problems |  | 38 | 90.48 |
| 1 | Unavailability of permanent fruit market | 11 | 26.19 |  |
| 2 | No bank CC and finance is difficult | 28 | 66.67 |  |
| 3 | supply from cold storage at later stage | 42 | 100.00 |  |
| 4 | More wastage of fruits | 20 | 47.62 |  |
| 5 | More wastage due to more handling of fruits (vendor) | 39 | 92.86 |  |
|  | Suggestions | 4 | 9.52 |  |
| 1 | Fruit Mandi, or permanent market place at ground flour | 4 |  |  |
| 2 | Customized portable light weight, ventilated racks or some Moulded structures is essential. | 4 | 4 |  |

The 100 percent vendors opined the problem of wastage of fruits in retail marketing. The other problems opined by the fruit vendors were supply of fruit from cold storage at later stage of total of fruit preservation period ( $66.67 \%$ ). The 47.62 percent vendors also said that fruit wastage is mainly due to more handling of fruits. The 26.19 percent vendors opined the difficulty in getting finance from bank and or getting cash credit from the bank. It was concluded that the fruit wastage is major problem of fruit and it need to be addressed.
The suggestions given by the fruit vendors were permanent place of marketing and requirement of customized racks. The maximum ( $92.86 \%$ ) fruit vendors opined that a fruit mandi and or permanent market places at various parts of cities at ground floor need to be provided for fruit selling. It will facilitate for less handling of fruits and ultimately reduction of fruit wastage which will in turn increase net income in retail fruit marketing. The 9.52 percent vendors also opined for requirement of customized portable light, weight, ventilated racks or some molded structure is essential for proper display of fruits which will also help for reduction of fruit wastage.
